

ASPIRATING SMOKE DETECTION VESDA SOFTWARE

XTRALIS VSC™

VESDA System Configurator (VSC) configures, commissions and maintains the full range of VESDA products, including VESDA smoke detectors, LCD Programmers and High Level Interfaces. VSC can configure a single VESDA smoke detector or your entire VESDA network.

All the features of previous versions of VESDA software (VConfigBasic and VConfigPro) are available in VSC together with additional features that allow faster setup, fault resolution and event diagnostics.

The software simplifies the setup, commissioning & programming of a VESDA installation and provides indispensable service & maintenance tools after installation.

Specific detector fault conditions are logged within the detector and VSC allows the system event log to be downloaded. Smoke trend graphs can be generated to pinpoint potential issues and these too can be saved using VSC.

VSC's context-sensitive Help provides step-by-step instructions to assist in executing common tasks and helps identify & diagnose systems faults.

VESDA ASPIRE™

The performance of an aspirating smoke detection system is dependent on the design of the pipe network used to transport air back to the smoke detector.

VESDA ASPIRE is a Windows®-based application that aids the specification and design of pipe networks for VESDA air sampling smoke detectors. It provides the designer with tools to speed the design process and ensure optimum network performance and installation quality. ASPIRE also makes implementation of the design easy. With automatic generation of lists of all the components required for the project and an Installation Data Pack, the installer will have all the information they need at their fingertips.

XTRALIS VSM4™

Xtralis VSM4 provides full and comprehensive integration of your VESDA smoke and gas detection systems.

VSM4 configures, monitors and trouble-shoots your Xtralis systems. It is easy-to-use and has been designed to provide you, the operator, with complete control. The user-friendly interface allows you to quickly assess and respond to system events - all from one convenient location.

VSM4 is a total solution for integrated control and monitoring of your Very Early Warning Xtralis smoke and gas detection systems.
